
Spin-off Creation

The typical methods of knowledge and technology transfer are **licensing or selling of intellectual property**; we usually have dozens of such cases per year.

Another model is the creation of the university's own company - the so-called **spin-off**. This model is applied in just a couple of cases per year - it is the most expensive and most complicated. However, given the specific outcome of the research, it **may be the most suitable option**.

The process of starting a spin-off company is described in the following scheme. Click to enlarge.
